

Close Your Files

Words: Gary McGath, Copyright 2009
Music: Daniel Glasser, "Close Your Eyes"

Close your files when done.
There are dangers if you don't.
Close your files, my darling.
There's a virus on the net.
The virus on the net
Will eat your files.

Save the work you've done.
There are Trojans on your disk drive.
The virus on the net
Will eat your files.

Run a backup every week.
Why do you think we say that?
So the virus on the net
Won't eat your files.

You used to have a spreadsheet.
You didn't write it out.
The virus on the net
Ate your file.

Do not yell to the sysop.
Who do you think let the virus in?
The virus on the net
Ate his files.

Garbage in and garbage out.
Who can account for the tastes of hackers?
The virus on the net
Will eat your files.

That is not a backup...
